

ABSTRACT OF THE DISCLOSURE

The roof window assembly comprises a main frame component and a window component including a glazing element. In order to reduce the influx of light an
5 external screening accessory is provided. The screening accessory comprises an elongate housing extending in parallel with the top and bottom members of the frame and from which a screening member is retractable by movement parallel to the side members
10 of the frame. An end member connected with a free end of the screening member extends throughout the width of the window frame and includes engaging means at either end of the end member for engagement with a transverse inwards recess in the outer side of each
15 side member of the window frame.
